

Brillante Ideen sind organisierbar

Dear Value Partners

After a series of experimentation at our office in Jakarta, ELO Digital Office Indonesia's research division finally manages to run **ELO Enterprise** on a newest **HP Server**, built with **Intel Itanium Technology**.

This new server family is among the first to take advantage of Intel new processor with its 64bit architecture. ELO Enterprise runs successfully on top of **Microsoft Windows Server 2003 Itanium edition**, designed specifically to operate on top of **HP Itanium Server**. Also successfully runs on this machine are **Microsoft SQL Server 64 edition**, a necessary requirement for ELO Enterprise.

Being able to runs on Itanium server gives edge to ELO Enterprise over its competitors, and makes it ready to take on the heavy duty jobs suitable for this next generation Intel Processor. Using Microsoft Windows Server running on Itanium server gives the user benefit of its compability with thousands of application already running on Microsoft Windows server.

With this success, ELO Enterprise with Itanium Server is perfect solution for a heavy duty document management task associated with medium and high level modern-day business.

Jakarta July 4th 2006
Best Regards
