

TWO EVENTS ONE GOAL

ELO's DocXtractor brings "large company's" technology to the small and medium business.

ELO's DocXtractor is Made in Germany, guaranteeing highest specifications, comprehensive functionality and significant ROI.

Launching in Australia a certified and well skilled team of professionals provide onsite solutions and Australian support when you need it and where you need it. Join our Melbourne Workshops.

Attend one of our two events and see for yourself how the solution captures data from paper and processes it automatically.

The first session is dedicated to Automated Invoice Processing – a breakthrough technology for the accounts payable department. Our second workshop provides insights how Forms can be processed without major human intervention.

Better, why don't you join both sessions and see how ELO's DocXtractor can make your company more efficient and more profitable.

Don't miss any of these two events and score a goal.
Two Events – One Goal

Thursday 29th March 2012

Sofitel Melbourne

8am - 10am

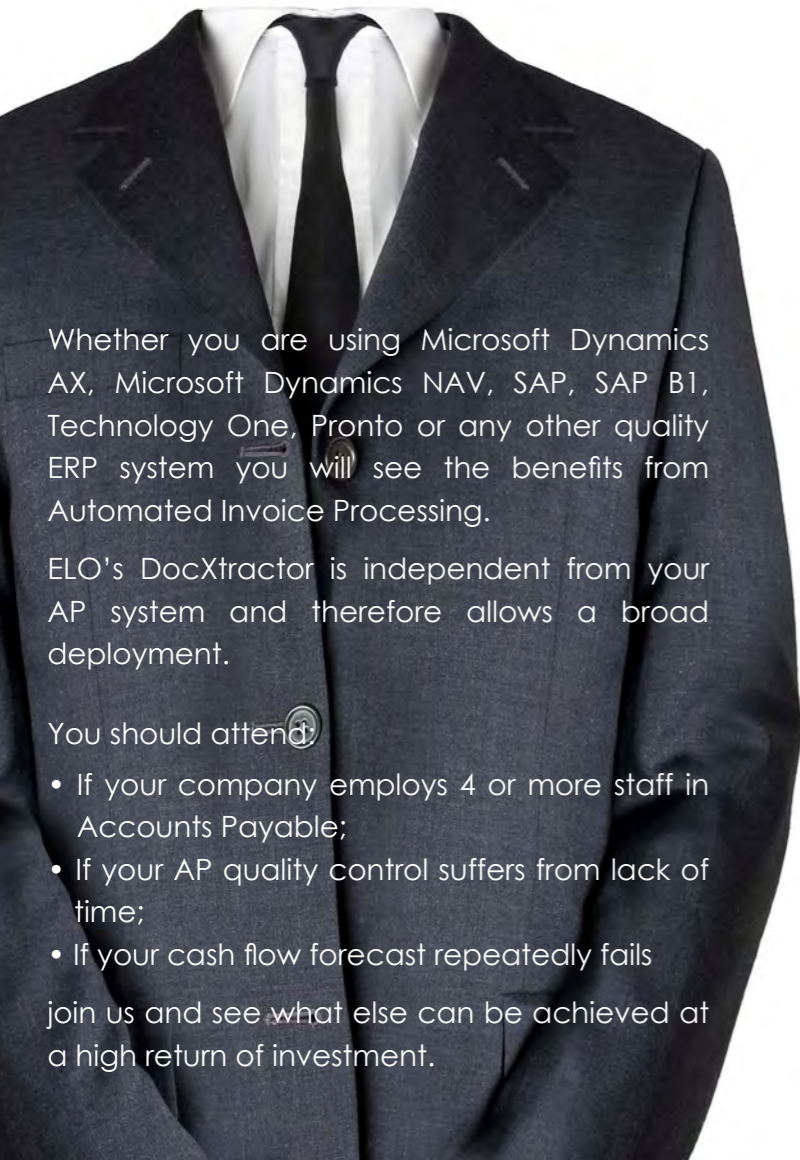

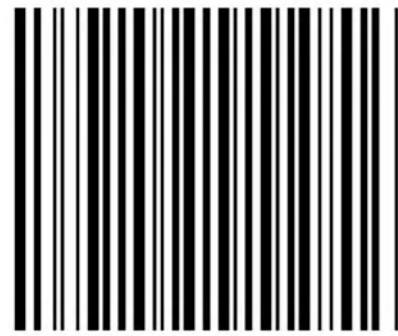

10am - 12am

The ELO DocXtractor is an application for the intelligent and automated classification and processing of incoming invoices. The system trains and learns both the structure and identifying features, creating a learning set with a small selection of sample documents. It is then in a position to analyse, evaluate and allocate the content of new documents with a very high degree of accuracy on the basis of class...

ELO's DocXtractor Workshop demonstrates modern Document Management Systems (DMS) and makes them relevant for the audience.

ELO's Document Management System has links to many AP systems, improving the efficiencies of all aspects of modern business processes.

- Compliant storage
- Version control
- Integrated workflow technology
- Email, Smartphone and Touch Pad integration
- Web access
- Australian implementation and support

Whether you are using Microsoft Dynamics AX, Microsoft Dynamics NAV, SAP, SAP B1, Technology One, Pronto or any other quality ERP system you will see the benefits from Automated Invoice Processing.

ELO's DocXtractor is independent from your AP system and therefore allows a broad deployment.

You should attend

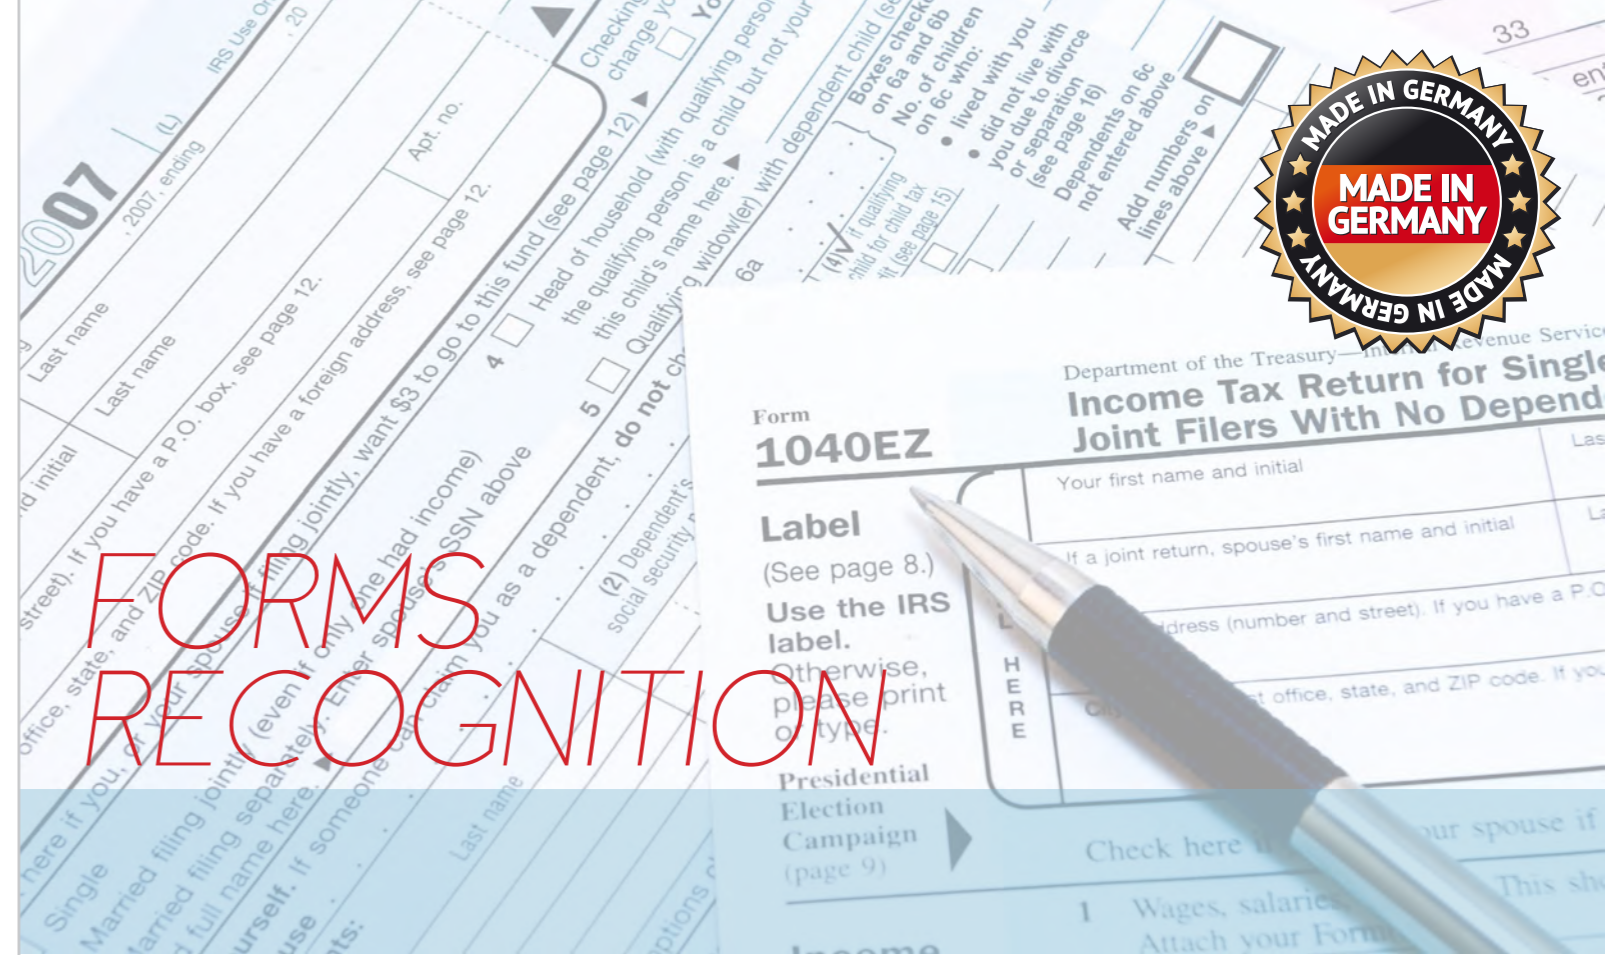

- If your company employs 4 or more staff in Accounts Payable;
- If your AP quality control suffers from lack of time;
- If your cash flow forecast repeatedly fails

join us and see what else can be achieved at a high return of investment.

**AUTOMATED
INVOICE
PROCESSING**

**FORMS
RECOGNITION**

Your Goal is Our Goal

For many years, automated data capture has been a product for large companies. And still today mainly industry heavy weights consider this cost saving tool.

The Australian SME market has had limited options when it came to compliant, comprehensive and cost efficient automation.

ELO's DocXtractor solution makes forms recognition relevant for almost all companies from almost all industries of almost all sizes!

Companies receive many types of different forms everyday, from orders to requests and replies. These arrive by post, fax and internet in varying quantities and with diverse field information.

With ELO DocXtractor a large volume of data can be captured in a short timeframe without compromising on image or data quality.

The simplicity of setting up forms and it's unique user friendliness enables this flexibility extendable system to successfully get started with business process optimisation.

Better even, ELO's DocXtractor comes pre-configured with an Electronic Document Management System. An advantage that reduces costs, increases leverage and provides workflow functionality out of the box.
